Summary

Cum Laude Computer Science graduate focused on full-stack development, with hands-on experience building and deploying web applications, REST APIs, relational databases, authentication, testing, and transactional workflows.

Technical Skills

Technical: Java, Python, TypeScript, JavaScript, PHP, React, Node.js, Express, Laravel, PostgreSQL, MySQL, Prisma, Tailwind CSS, REST APIs, Git

Experience

RADMedics Corporation Full Stack Developer Intern

Aug 2025 – Sept 2025

- Built the company's website using Laravel and Tailwind CSS, developing responsive pages and reusable interface components.
- Structured site content and navigation to improve access to company services and resources across devices.
- Deployed and optimized the website using asset compression, lazy loading, and caching to improve production performance.

Education

Polytechnic University of the Philippines
Bachelor of Science in Computer Science
Cum Laude

City of Manila, Philippines
September, 2026

Projects

TindaTrack - Inventory & Sales Management System

[GitHub Link](#)

React • TypeScript • Node.js • Express • PostgreSQL • Prisma • Tailwind CSS

- Built and deployed a full-stack inventory and sales management system with product management, role-based access control, reporting, audit history, and transactional workflows.
- Implemented transactional sales with server-side stock and price validation before atomically recording sales, line items, inventory movements, and audit records.
- Designed inventory around a traceable stock-movement ledger, deriving stock changes from recorded transactions instead of independently editable quantities.
- Developed and tested REST APIs using Express, Prisma, PostgreSQL, Zod, and JWT authentication, with automated tests built using Vitest and Supertest.

Unified Traffic Violation & Demerit System

[GitHub Link](#)

React • Vite • Express • MySQL • Tailwind CSS

- Developed a full-stack traffic violation management system supporting ticketing, violations, payments, user management, reporting, permissions, and audit records.
- Built React and Express workflows backed by MySQL, implementing authentication, role-based functionality, database migrations, and seeded development data.
- Structured the application into independently maintainable frontend and backend layers with repeatable environment configuration and database setup.

HomeRoom

[GitHub Link](#)

Laravel • PHP • Blade • Tailwind CSS • SQLite

- Contributed to landlord and tenant workflows covering rental payments, household management, announcements, and account history.
- Implemented payment-tracking workflows using Laravel and SQLite across client-facing and administrative interfaces.
- Built reusable Blade and Tailwind CSS dashboard components for payments, household information, announcements, and maintenance records.
